

ICS360.IAM

Identity Access Management

ICS360.IAM - WHAT IS IT?

ICS360.IAM Helps:

- Prevent local incursion to machines on the plant floor
- By requiring presentation of some form of ID
- Before interaction with the desktop is allowed

Desktop Locking

How is ICS360.IAM Different than:

- Windows Logout?
- Windows Screen Saver?

- 1. Access to the Desktop is Blocked
- 2. Affects Both Mouse and Keyboard
- 3. Software and User Sessions Continue
- 4. Fast Unlock (via Badge, Pin, or Password)

Desktop Locking

Unlocking Option

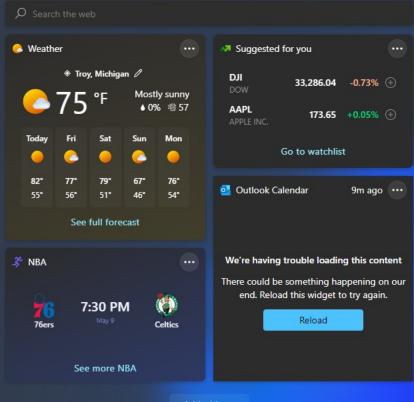

- RFID Badge-In (Primary)
- 2. PIN-Entry (backup approach)
- 3. User ID/Password (backup approach)
- 4. Admin Login (configuration access)

Scan Badge To Unlock

USB Device Locking

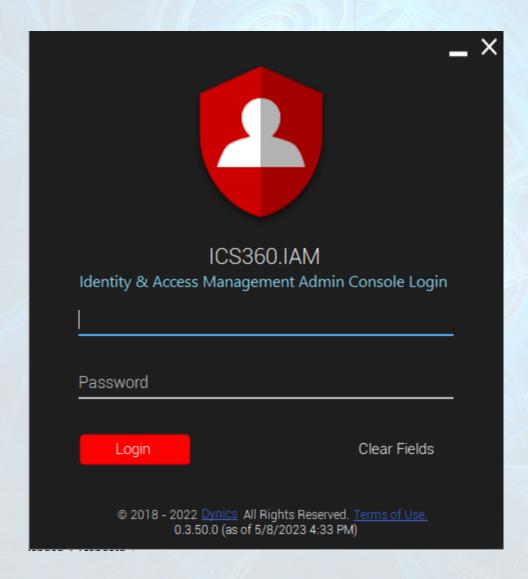

USB/Flash Drives Present Security Issues:

- Auto-run can automatically run malware
- Viruses can easily be transferred

- 1. Specific USB devices can be blocked
- 2. For all users, or only specified
- 3. Default locking policy for new devices
- 4. Provides easy disabling of Auto-Run

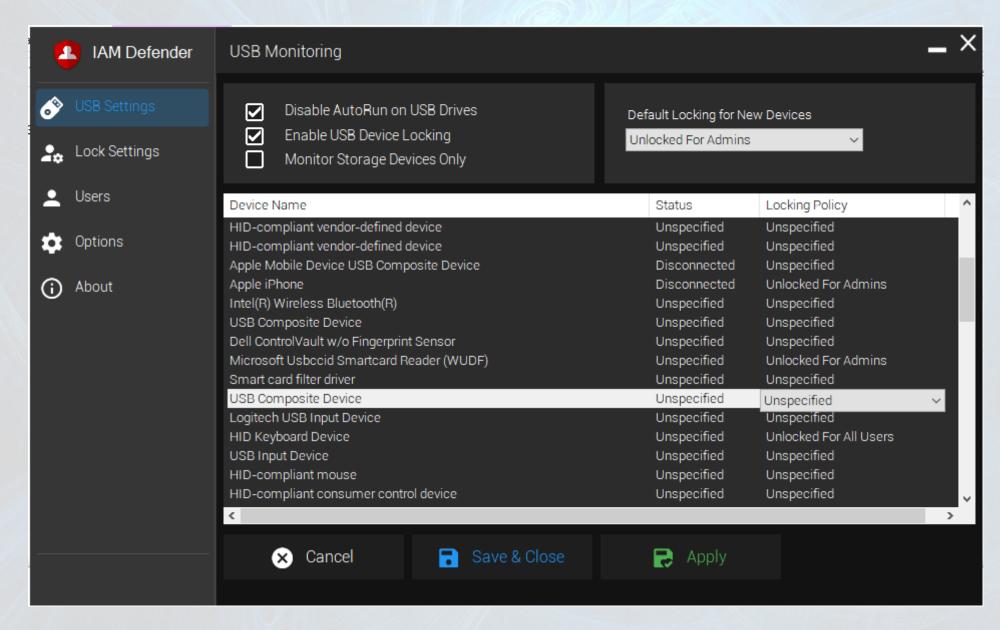

Configuration Login

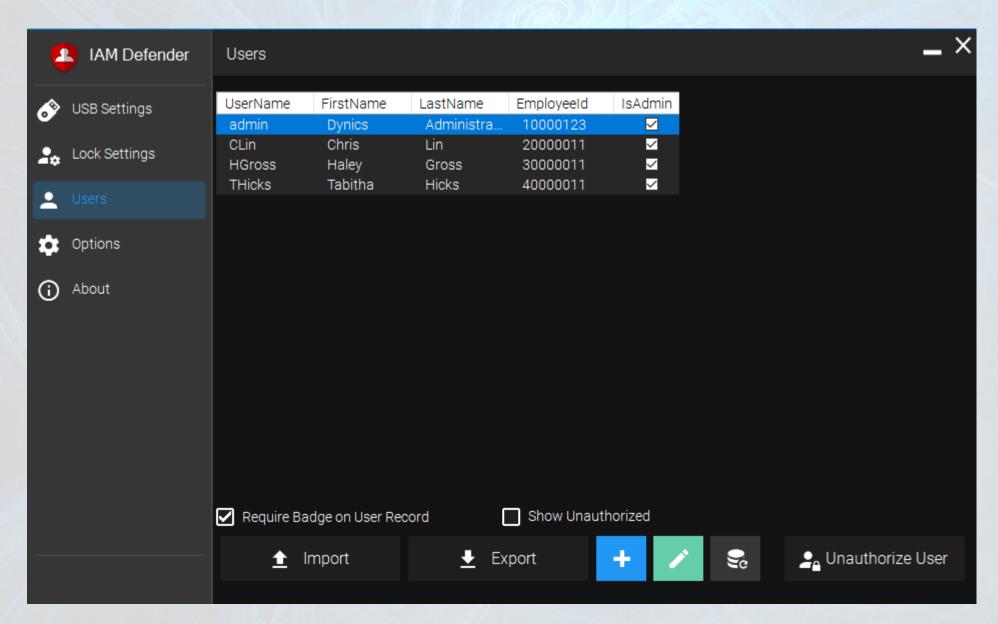

Configuration: USB Monitoring

Configuration: Users

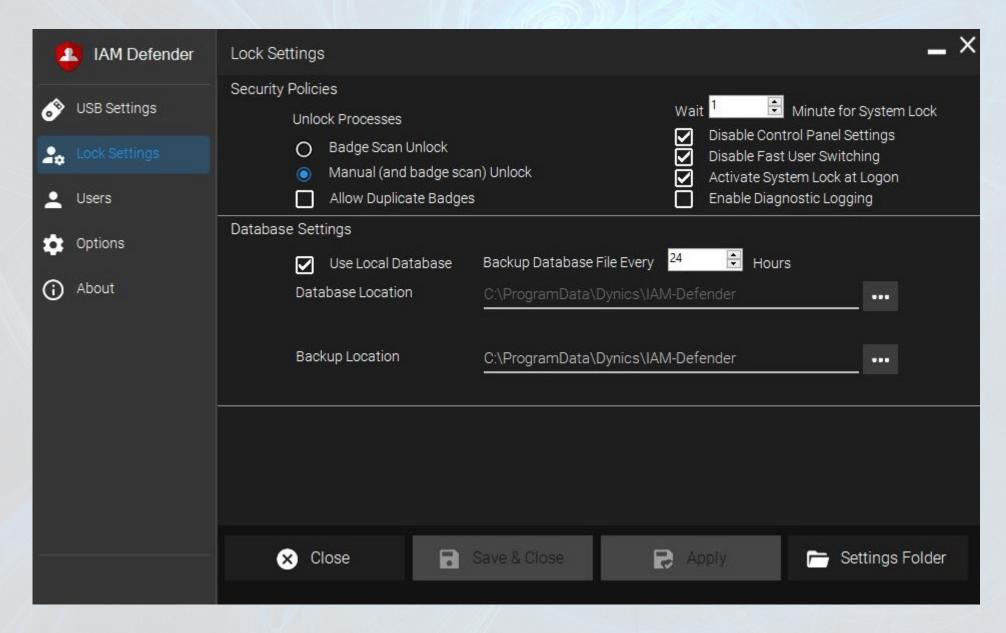

User Management

User Database Locations

- 1. Each Installed ICS360.IAM Machine
- 2. Shared Network Location
- 3. DCC Managed (Client/Server)

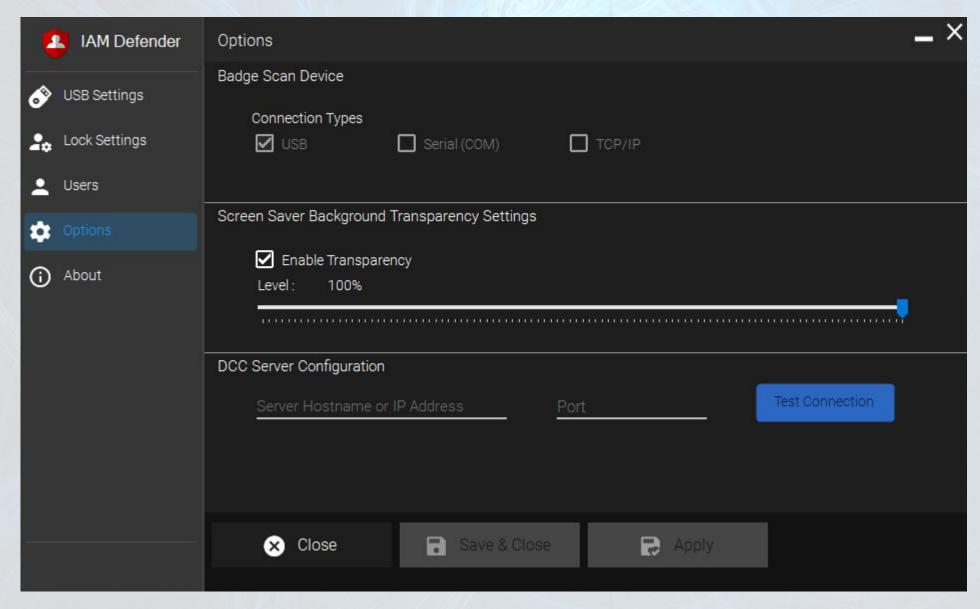

Configuration: Lock Settings

Configuration: Options

Security Audit

Security Event Collection

- 1. Each Lockout/Unlock
- 2. Each Badge or Login Attempt
- 3. USB Device Activity
- 4. Services Shutdown/Startup
- 5. Windows System Activity

Advanced Features

IAM Remote Management Features

- 1. User and Device Grouping/Administration
- 2. USB Device Monitoring/Locking
- 3. Windows Service Monitoring
- 4. System Warning and Error Monitoring

Wishlist/Future Enhancements

Future Possible Roadmap items

- 1. Multi-monitor locking (recently added)
- 2. View/Configure Antivirus Status
- 3. File Whitelisting (like SolidCore)
- 4. Push Remote IAM Software Updates
- 5. Other Authentication Hardware?

Thanks for your time, any questions?
