

# STREAMLINING THE OT SECURITY PROCESS: THE DYNICS AND ELITEOPS PARTNERSHIP

## DYNICS & ELITEOPS QUICK STUDY

While OT security has always been important, it seems to have finally caught the attention of those at the board level. This is fueled by the rising number of vulnerabilities which are introduced by the increase in technology present in plant floors. That's why EliteOps and DYNICS have partnered to put their worries at ease. As a value added reseller that specializes specifically in security, EliteOps works with clients throughout the entire project cycle of implementing an operational security program.

In order to achieve this, they focus on three core elements - visibility, prevention and automation. To accomplish these goals, they bring in DYNICS' products to streamline the process and provide a one-stop shop that reduces the need for segmentation, requires less players, and offers quick and easy access to quality data and insights across enterprise-scale operations. In turn, it makes it easier to enact real-time solutions that block potential problems from the get-go.

## Benefits

- As EliteOps assists enterprises to implement operations security programs, they enlist DYNICS and its products to ensure that the process is streamlined.
- Through the use of DYNICS' products, EliteOps' clients have access to quality data and insights that allow them to implement real-time, preventative solutions when potential problems or vulnerabilities pop up.
- By having easy to use products from one provider, EliteOps' clients are able to save time and resources that ultimately protect operations, especially OT activity, which is an increasing concern of executive boards as the attack surface widens.
