

SIMPLIFYING AND STREAMLINING SECURITY

RISOUL'S USE OF ICS360.DEFENDER

DYNICS AND RISOUL CASE STUDY

"Cybersecurity is something that we have to do every day," says Jorge Ivan Luna Quiroz, cybersecurity expert at Risoul. And the first line of defense is often the users. That's why Risoul, a distributor of DYNICS, is utilizing ICS360.Defender to simplify access to data and streamline communication. Through ICS360.Defender's organization of information between workstations and PLCs, it helps Risoul to inventory devices, prioritize what needs attention, detect anomalies, segment for greater protection, and, ultimately, block intrusions. In turn, the process of securing IT and OT networks becomes much easier for Risoul to guide their clients through, bringing Mexico one step closer to stronger cybersecurity.

BENEFITS

- ICS360.Defender is designed to secure both IT and OT networks.
- Through its organization of data, ICS360.Defender makes it easy to maintain an up-to-date inventory of devices and streamlines communication between workstations and PLCs.
- Users like Risoul are then able to better detect any suspicious activity, segment networks for enhanced protection, and prevent potentially detrimental intrusions.
